

# Stellium is the UK's sustainable colocation, global subsea and terrestrial communications hub.

- A major UK interconnection hub and meeting place for data-transfer
- The cable landing station for the international Aqua Comms and Altibox Nordics subsea cables
- The home of the UK's newest Internet Exchange Point NCL-IX.
- We provide 80 MW's of Green Sustainable Power.
- We provide metered power contracts for full transparency.
- We provide mobilisation time for contracts up to 1.3MW in 4 weeks.
- Some of the lowest latency now available in the UK. Now closer to New York than the capital is.
- No cooling issues - unlike London data centres who experienced major cooling issues in 2022, Stellium had none.

Collaborative. Client Centric. Colocation. Cloud. Connectivity.
